Patent No. 5942400

GENERAL INFORMATION:

APPLICANT: Anderson, John P.

APPLICANT: Sinha, Sukanto

APPLICANT: Jacobson-Croak, Kirsten L.

TITLE OF INVENTION: Inhibition

NUMBER OF SEQUENCES:

ADDRESSE: Townsend and Townsend and Crew LLP

STREET: Two Embarcadero Ctr., 8th Floor

CITY: San Francisco

STATE: California
                                                                                                                                                                                                                                            Length 423
                                                                                                                                                                                                                                                                              4; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CII.

A,Molecule type: mRNA
A,Residues: 1-1088 «KRI»
A,Cross-references: UNIPROT:P16170; EMBL:M25696; NID:g214609; PIDN:AAA49909.1; PID:g2146
A,Notes: the authors translated the codon AAA for residue 970 as Leu
C,Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM mol-
C,Comment: Several forms of NCAM are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of a large cytoplasmic domain fo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ,41-93,136-186,232-282,323-379,420-473/Disulfide bonds: #status predicted
